

# Corporate Information Package

**NIVEE**

Cyber Security Inc.

LET OUR EXPERTS  
KEEP YOU SECURE  
IN THE DIGITAL WORLD

# Message from Nivee's President

The business landscape has been challenging over the past several years. Building and operating a successful business is never easy, however the pandemic has made the business environment that much more difficult. Organizations that have never had an ecommerce footprint or a remote work policy, were suddenly required to shift focus and quickly pivot in order to operate in the new normal.

North American businesses have shown incredible resilience and perseverance throughout these new and demanding requirements. It has been an inspiration seeing how individuals and businesses have been able to adapt, and how communities have joined together to support one another.

Unfortunately, since the onset of the pandemic, we have seen a sharp increase in cyber crime. Our company mission has never been more relevant than it is today: "To Keep People Secure in the Digital World." This is why we exist. This is what we have built the company for. My brother and I started this company in 2019, before the effects of the pandemic. And even then we had already seen the need for attainable cyber security services in the marketplace.

I am proud of, and motivated by, my heritage of Native Canadian and Trinidadian. Just recently, I was able to connect with my roots, which were previously unknown. My father was a part of the "Sixties Scoop" which allowed authorities to "scoop" up indigenous children from their families to be put up for adoption. Because of this, my father never knew his heritage. We finally discovered that my father was part of the Vuntut Gwitchin First Nation in Old Crow. Since then, I have been able to visit the traditional grounds and learn how to introduce this new found culture into my life.

As an ambitious entrepreneur, the best way to express my heritage was to place it front and centre in this business that my brother and I founded. "Nivee" means "Warrior" in the language of the Vuntut Gwitchin First Nation. We are committed to building this Indigenous-Owned business in hopes to inspire others in our community to entrepreneurship and cyber security. Our core values include that "We are unified in our Diversity," and as we grow we want to expand the skillset of our youth through training programs, scholarships and internships to attract those who are interested in the Cyber Security profession. We are excited to expand the marketplace for Indigenous businesses in the corporate world while providing essential and attainable cyber services.

**Zach Stewart**  
President

## Our Company

Nivee is an Indigenous-Owned, cyber security firm which offers **Cyber security Auditing** and **Assessment** services to test and identify risks that may lead to cyber attacks. Our services are offered throughout North America and we are headquartered in the Greater Toronto Area.

We are a proud Aboriginally owned and operated business. Our ownership consists of individuals from the Vuntut Gwitchin Nation in Old Crow, Yukon.

“**Nivee**” means “**Warrior**” in the Vuntut language.

As we develop our organization, we continue to look for other Aboriginal businesses to partner with and to grow the marketplace for Aboriginal services in the corporate world. We are members of CCAB, the Canadian Council for Aboriginal Business, which helps connect Procurement Champions with organizations like us to help them fulfill their procurement needs and goals.

— A proud member of —

## Mission & Values

Nivee is made up of individuals who are driven by their passion to uncover and prevent cyber security exploits. We deliver security and therefore we seek out those who find meaning and purpose in this mission. We believe in waking up everyday to make an impact, and we achieve this by keeping the digital footprint of our clients secure.

### Purpose

To Keep People Secure in the Digital World

### Mission

Assemble and empower those who are passionate about our purpose, to collectively enable our customers to focus on their passions.

### Vision

Our customers cyber concerns are irrelevant, because we have got them covered.

## Core Values

### We are Unified In our Diversity

We are stronger when unified as a team of diverse individuals and perspectives. Our inclusive mindset encourages unique contributions to drive effective decision making.

### We Earn our Success; We Own our Failure

Nothing in this life is given, it is earned. We put in the work and earn our successes. And when we inevitably have failures, we own it; we admit it; and we work together to find solutions.

### We Exceed Expectations

We believe that our mission statement defines work that is worth doing. We want to be a group of individuals who are so deeply driven by our passion, that we cannot help but consistently exceed expectations.

### We Dare to Take Risks

Collaboration and innovation can be stifled by the perceived risk of looking or feeling inadequate. Our team encourages taking these risks in an environment conducive to self expression and participation. We build better solutions when everyone feels comfortable to contribute. So voice your ideas, listen to others, and ask your questions.

### We Welcome the Storm

Strong winds create deep roots. A tree that never endures the winds of a storm will grow shallow roots and inevitably fall. It is the storm which strengthens the tree, developing deep roots and strong branches. Like a tree, we welcome a challenge. It is life's challenges that strengthen us and encourage us to grow.

## Cyber Landscape

Cyber Incidents is the most important global business risk category for 2022

Source: 2022 Allianz Risk Barometer Report, January 2022

### \$4.24 million

The average cost of a data breach to businesses

### \$541,000

The average ransomware payment in 2021

Within the category, Ransomware and Data breaches are the main concern

Reasons why businesses need to be concerned with cyber security risk

Overall Business Interruption

Compliance Requirements

Contract Requirements

Foster Strong Client Relationship

## Our Services

We provide a range of “**ethical hacking**” services where we simulate real-world attacks on our customers digital infrastructure. Regulations and compliance mandates are becoming more stringent. Your industry will soon require one or more of the following:

### Penetration Testing

Penetration testing is the process of identifying security gaps and issues in your IT infrastructure by emulating the tactics, techniques and procedures of a real world attacker.

### Vulnerability Assessments

In these assessments, we gain an awareness of all the potential areas of exposure in your organization; from there we can help build mitigation strategies to prevent these potential threats from breaching your systems.

### Social Engineering Assessments

We test your organization’s security, employee training and awareness by seeing how your policies, procedures and your team react to simulated attacks on your organization’s data. This service is often done by phishing and emulating real-world attacks.

### Red Team Engagements

Rather than just attacking or identifying vulnerabilities from the outside, Red Team engagements are a multi-layered approach that can help an organization see vulnerabilities in their processes, facility security, people and more. These services are done on the physical premises of the organization.

### PCI Penetration Testing

This pen testing helps you meet PCI-DSS requirements by identifying vulnerabilities present in the CDE before a “malicious” attacker is able to discover and exploit them.

### Cyber Posture Assessments

This goes beyond offensive security activities that solely focus on your organization’s preparedness; this looks not just at your systems, but also the people and processes surrounding your systems.

### Executive Security Awareness Program

Executives are the number one target of cyberattacks. Our Executive Awareness Program builds habits and defenses against malicious threats for C-suite and Executive personnel.

Our solutions provide our clients with the ability to identify and assess issues, provide guidance and recommendations to stop reoccurrence and ultimately protect data and sensitive information.

## Working with Nivee

### Our Process

## Why should you choose Nivee?

We aim to **earn** your business.  
We work to **keep** your business.

### Accreditations and Certifications

Our Information Specialists are equipped with the best education in Penetration Testing.

### Custom-Tailored Solutions

Every organization is different, so should every assessment. Our assessment is custom tailored to your needs.

### Reporting

We provide a detailed analysis of each issue that we have found and prioritize them based on the vulnerability severity

### Procurement

Nivee is an Indigenous Business that can help you achieve your procurement goals.

### Affordability

It is a mission at Nivee to keep our overhead costs low and keeping our solutions affordable to our customers.

# 07

## Certifications

Our consultants have several industry recognized certifications:

- » SANS GIAC Penetration Tester [GPEN]
- » Global Industrial Cyber Security Professional [GICSP]
- » Offensive Security Wireless Professional [OSWP]
- » ISC<sup>2</sup> Certified Information Systems Security Professional [CISSP]

These accreditations and certifications are best-in-class so our customers are always receiving the most recent and best services.

As a collective group we have the confidence and experience in providing assessments, solutions and security to Enterprise Businesses, Healthcare Industries, Government Industries, Technology-based companies and many more.

Our team is invested into continuous education programs so we are learning all of the latest trends, technologies, and attack methods to ensure that your organization is taken care of no matter what changes come in the ever-changing digital environment.

# 08

## Giving Back

As we grow this company, we want to give back to the community and support awareness efforts surrounding cyber security. We want to use our passions and motivations and share these with others. Through workshops, mentorships and scholarships, we want to support our local and global community.

### Ways in which we give back:

#### Cyber Security Awareness

Spreading awareness of cyber security threats along with providing effective solutions and suggestions to strengthen your digital posture.

#### Entrepreneur Mentorships

Nivee is built from entrepreneurs and we continue to hire and partner with those who have the same drive. We want to encourage this way of thinking and promote young people to dream big.

#### Community Classes and Workshops

Small communities are going digital, and Nivee looks for opportunities to hold free community classes and workshops regarding digital security.

#### Scholarships

Our industry needs more skilled individuals. Our community is full of untapped potential and Nivee wants to help promote high-schoolers in their cyber education journey.

## Connect with us!

### How can we help you?

Scan/click the code to connect with us!

Do you have any questions regarding our company or the services we offer? We would be happy to learn more about you and your company.

Are you unsure where to start with your cyber security posture? We don't blame you. Cyber security is complex. There is a lot of information on the subject, but few recommendations towards action.

Connect with us and let us build the roadmap to digital security for you! Book a free assessment and we can begin crafting your path to a safer digital future.
